Re: Animal Welfare Assurance
#A3180-01 (OLAW Case 1J)

Dr. David L. Wynes
Vice President for Research Administration
Emory University
1510 Clifton Road-Suite G65
Atlanta, GA 30322

Dear Dr. Wynes,

The Office of Laboratory Animal Welfare (OLAW) acknowledges receipt of your May 1, 2008 letter informing us of an instance of noncompliance with the PHS Policy on Humane Care and Use of Laboratory Animals at Emory University. Your letter was subsequent to an initial report to our Office by Mr. David Knight on April 1, 2008. According to the information provided, OLAW understands that a lab was found to have been withholding protocol-required post-operative analgesia on approximately 125 mice since the beginning of 2008. The initial report indicated that these activities were PHS supported.

The corrective actions consisted of the stopping of surgical procedures until the noncompliance was corrected. A protocol modification was submitted utilizing a lower analgesic dose and to provide the analgesics after recovery. The PI also met with the research staff to enforce the need to adhere to protocols.

The Emory University School of Medicine's handling of the matter was consistent with the philosophy of self regulation. Similarly, the timely and appropriate action taken to resolve the issue and prevent recurrence was appropriate. We appreciate being informed of this matter and find no cause for further action by this office.

Sincerely,

Brent C. Morse, DVM
Animal Welfare Program Specialist
Division of Compliance Oversight
Office of Laboratory Animal Welfare

**Re: Emory University Institutional Animal Care and Use Committee (IACUC)
Reporting AWA # A3180-01**

Dear Dr. Wolff:

As Institutional Official for Emory University's Institutional Animal Care and Use Committee (IACUC), and in accordance with applicable regulatory requirements, I am writing to report protocol violations involving the following protocols:

- Protocol #221-2005: *Vascular specific ACE expression and atherosclerosis;*
- Protocol #081-2006: *Molecular mechanisms of AAA formation; Nanotechnology; Detection and Analysis of Plaque Formation;*
- Protocol #095-2007: *Determining the role of the Renin receptor in atherosclerosis; and*
- Protocol #154-2007: *AGEs and vascular Inflammation*

This matter was initially reported to OLAW by telephone to Dr. Brent Morse on April 1, 2008.

On March 4, 2008, during the AAALAC site visit of Emory University, which also constituted the IACUC semi-annual inspection, concern was expressed over a laboratory's failure to use analgesics as described in the protocols listed above. In response, members of the IACUC Office conducted a review of the protocols and met with the Principal Investigator (PI) on March 24, 2008 to discuss the concern. All surgeries were halted until the non-compliance could be corrected. The review indicated that the surgical procedures described in these protocols were similar and that the use of analgesics after surgery was prescribed in all of the protocols. The evaluation of animal records indicated a failure to provide analgesics as described in the approved protocols. The PI reported that the recommended dose of analgesic resulted in a higher mortality from respiratory failure immediately after surgery on mice. This seemed to be the result of a synergistic effect with the anesthetic being used. Since the beginning of 2008, it is
